

Cracking the Churn Code.

A Data-Driven Strategy to Keep Fit.ly Moving.

Stopping the Leaky Bucket

The Problem

We've been seeing a major "leaky bucket" trend. People sign up with high energy, but they aren't sticking around long-term. We've been reactive when we need to be proactive.

The Mission

I audited our Account, Activity, and Support data to find the "smoking gun" behind churn. We're building a system to stop cancellations before they happen.

Getting the Data Right

Standardized ID

Created a numeric Primary Key (user_id) across all systems for a 100% match rate during merging.

Churn Logic

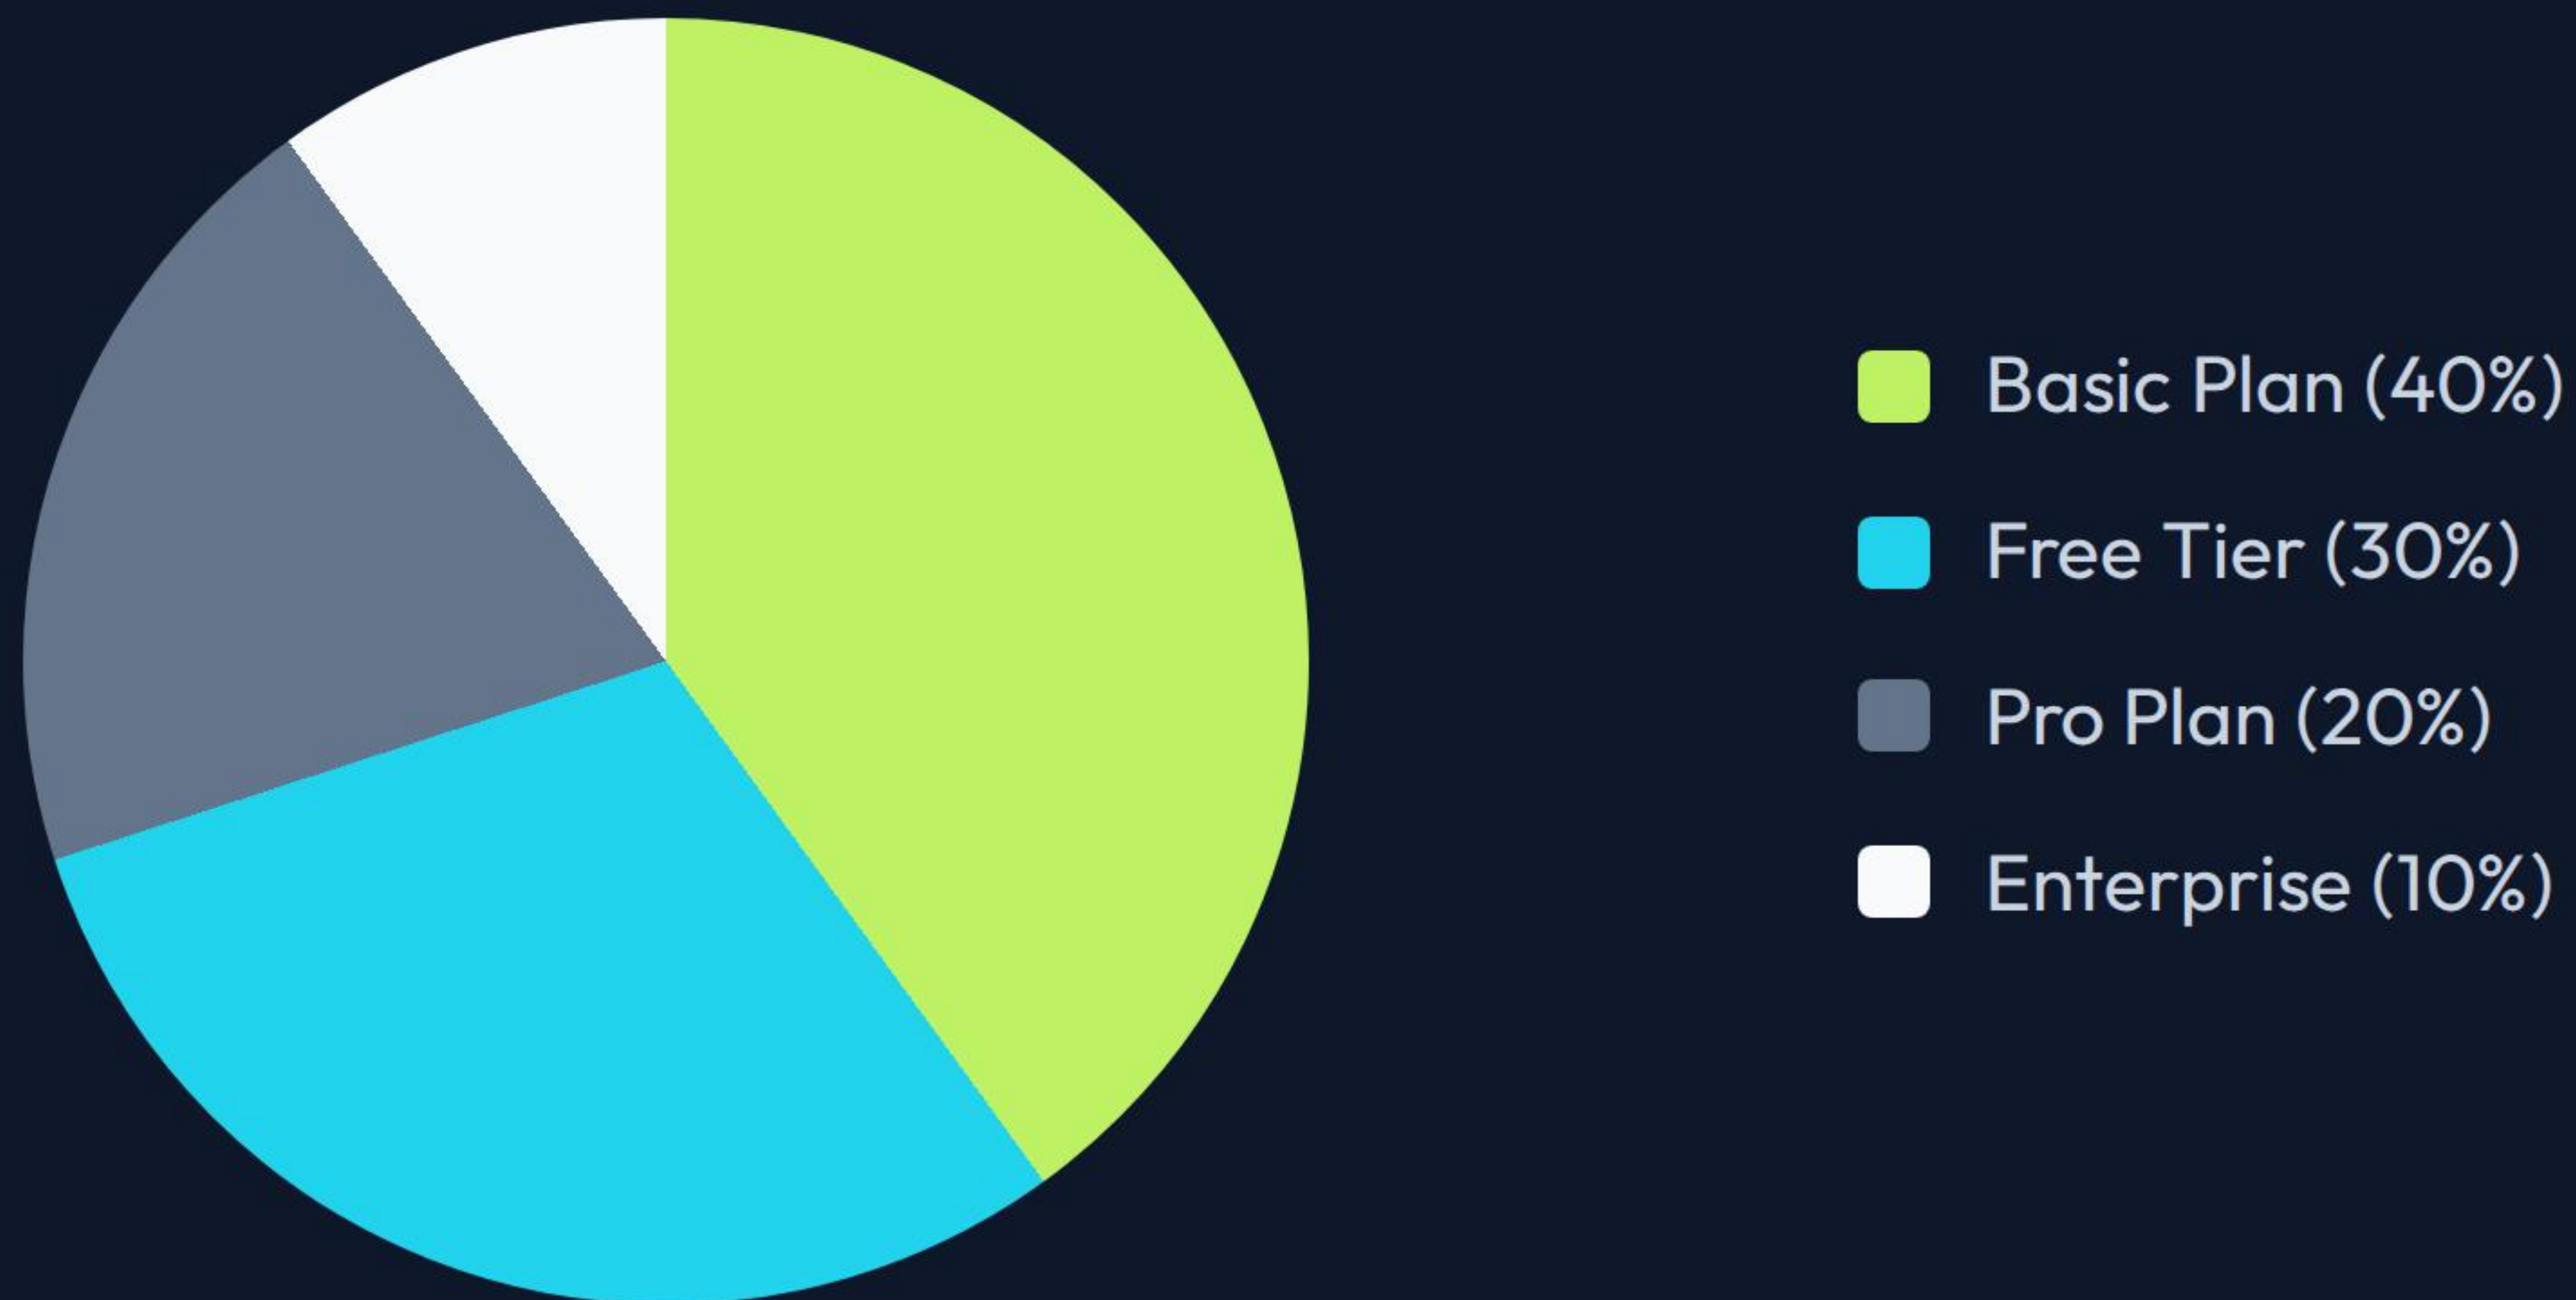

Backfilled churn status for active subscribers, fixing a 71.5% gap in our reporting visibility.

Timeline Fix

Normalized all event times to identify "Recency"—the key to spotting inactive ghost users.

Who are our Subscribers?

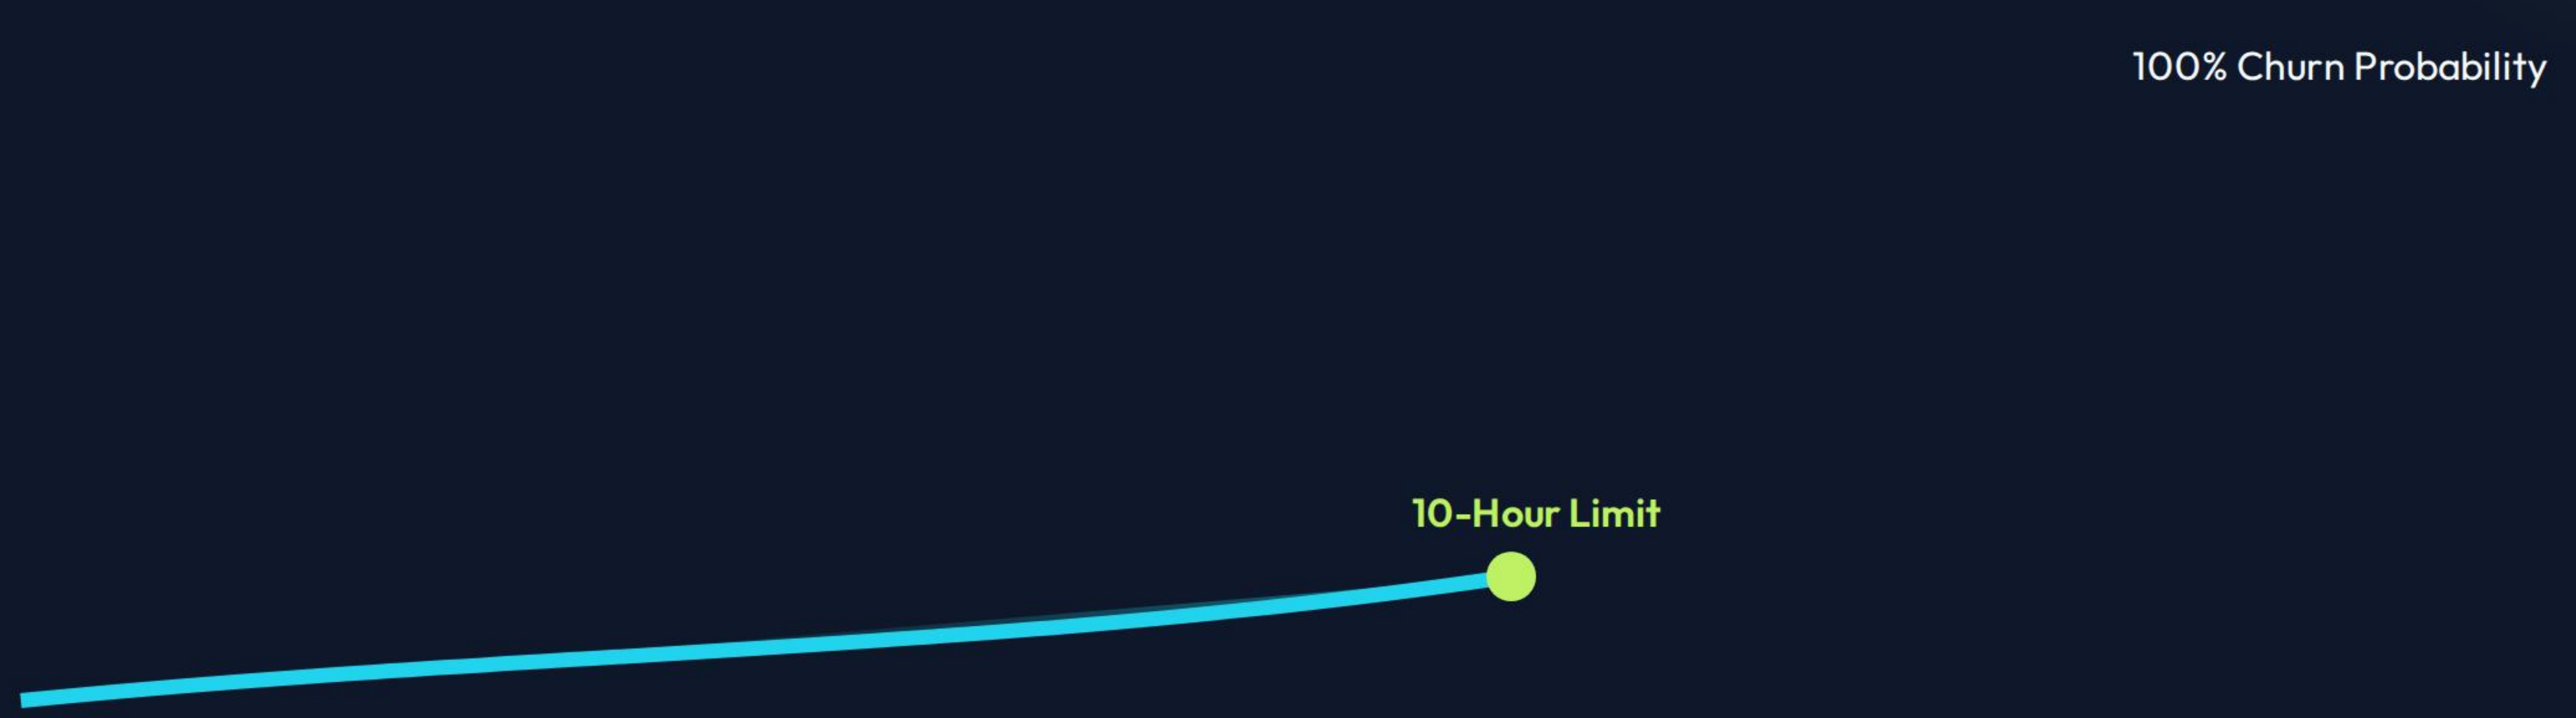

Our base is heavily weighted toward Free/Basic tiers, which carry our highest churn risk.

The "Track Workout" Lock

Passive users leave. Active trackers stay. We have to get users logging actual workouts to secure their long-term loyalty.

The 10-Hour Breaking Point

Support speed is the #1 predictor of churn. If we take over 15 hours to resolve a ticket, the user is as good as gone.

Segment Churn Risk

Subscriber Tier	Current Churn	Resolution Avg	Status
Free Tier	41%	19.2 hrs	High Risk
Basic / Pro	18%	12.5 hrs	Monitor
Enterprise	26%	17.8 hrs	Friction Alert

The "At-Risk" Index

42.5%

Current Rate

Our New North Star

I'm introducing the **At-Risk Rate**. It tracks any user with 0 activity in 7 days OR a support ticket > 10 hours. This is our early warning system to stop churn before it's official.

The Game Plan

- ⚡ **SLA Optimization:** We must resource support to ensure no ticket crosses the 10-hour mark. This alone could slash churn by 60%.
- 🔥 **The "Power of Two":** New users **MUST** log 2 workouts in their first 72 hours. Launching an automated campaign to push this feature.
- 👑 **Enterprise Priority:** Flagging Enterprise tickets as "Urgent" so they never hit the 10-hour friction point.

Let's Level Up.

Time to stabilize Fit.ly and keep our users moving.
